

DECLARATION OF RALPH E. WESINGER, JR.

I, Ralph E. Wesinger, Jr., do hereby declare and state:

1. I am a named inventor of United States Patent No. 5,778,367 and all continuation patents and applications based thereon. This declaration is based upon my personal knowledge.
2. In the fall of 1994, I was President and majority shareholder of Scientific Research Management Corporation, which subsequently changed its name to Network Engineering Software ("NES"). For convenience, I refer to the company as "NES" throughout this declaration.
3. In this time frame, NES was in the business of assembling, installing and servicing computers and computer networks for its clients. The general public was just beginning to use the internet, and many of NES' clients were asking its assistance in connecting to the internet, establishing a website presence and directing traffic to their website. Several of these clients were located in Honolulu, Hawaii, and I discussed these issues with them on a business trip there in the fall of 1994.
4. During my business trip in the fall of 1994, several of NES' Hawaii customers mentioned problems that they were having with Yahoo!, a company that had an on-line directory of web pages to whom NES' customers paid a fee to have their web pages listed. At this time, Yahoo! required that its customers email it a proposed listing that Yahoo! would then edit and categorize.
5. The problems NES' customers were encountering included Yahoo! changing the text of the listing, thereby creating inaccuracies and typographical errors, and Yahoo!

improperly categorizing the listing, making it difficult for third parties to locate. Furthermore, if an NES' customer wanted to modify or update its listing, it was required to again email its changes to Yahoo!, and the same editorial and categorization process transpired once again. In addition to these fundamental problems, customers of Yahoo! were required to have a web page and a web address prior to posting a listing on Yahoo!, making it an expensive process as well for those customers who only had one or neither.

6. As a result of the problems NES' customers were having with Yahoo!, I began to think of ways to solve these problems. I conceived of the concept for what eventually became known as the "Internet Front Door" by at least November 26, 1994.
7. I recall this specifically because I attended a high school reunion at the Sheraton Boxborough in Boxborough, Massachusetts on that date, and discussed NES and its internet business goals with William Kennedy, a high school classmate whom I understood was connected to the venture capital business. I know that I had conceived of the Internet Front Door when I had this initial discussion with Mr. Kennedy because I was interested in raising capital for NES so that it could pursue the Internet Front Door and other ideas the company had for internet-based products.
8. After the discussion with Mr. Kennedy at our high school reunion, he was interested in learning more about NES and its products, and we subsequently scheduled December 16, 1994 for him to visit the company in San Jose, California.
9. The Internet Front Door idea included a website with a database that was accessible by users of the internet. Users who accessed the website with a standard web browser

could fill out a form to create a listing or entry, which could include text, graphics, a uniform resource locator or a category specifically selected or created by the user. If an internet user created such a listing, he or she could post it in the database without any editing or categorizing by the website provider or other third party. Each listing was identified through a unique transaction ID, and a user could access his or her listing or entry and update or modify it in real time. All entries posted on the website database were searchable on the website by users of the internet.

10. On December 16, 1994, I met with Mr. Kennedy at NES' offices in San Jose. I believe that Mr. Coley may have also attended the meeting. The meeting lasted for the morning and we then had lunch. During the meeting, I discussed the Internet Front Door concept with Mr. Kennedy at a high level, describing it as a gateway allowing an internet customer to publish information on a website database without third party editing, and allowing the user to control and modify that entry.
11. On December 21, 1994, Mr. Kennedy sent me a letter following the meeting confirming our discussions, a true and correct copy of which is attached hereto as Exhibit 1.
12. I hired co-inventor Christopher Coley as an independent contractor in late summer, 1994. He initially worked on network set ups and connecting NES' clients to the internet, and then joined the company full time effective January 1, 1995. After he started as an employee, Mr. Coley was primarily involved in setting up the NES' data center, which was the underlying infrastructure for hosting clients' websites on a database that is connected to the internet.

13. In February 1995, Mr. Coley began writing the source code for the Internet Front Door. He was working on several other projects at the time, including a multi-homed server and a firewall product. Mr. Coley's programming work for the Internet Front Door included HTML code, CGI scripts and the code that would implement the functionality for users to create and modify their database listings.
14. The first embodiment of the Internet Front Door concept was the Golf USA website, a true and correct graphical excerpt of which is attached hereto as Exhibit 2. The Golf USA database included golf courses throughout the United States, and internet users could add and modify golf course database entries in the same fashion as I had originally conceived.
15. Users were able to add golf course entries to the site, and index their entries in categories of their choosing along with an associated description of the golf course. If no suitable category was available, users could create a new category with a category description provided by the user.
16. Users could log into the site using a User ID and password to access and update their entries. An indication we named a Transaction ID was stored in the database that associated the user's entry with information and content related with the entry.
17. NES applied for registration of the domain name for golfusa.net on May 9, 1995 and it was registered on May 16, 1995. A true and correct copy of the application and domain name registration are attached hereto as Exhibits 3 and 4. The source code for the Golf USA website was written during April and May, 1995, as evidenced in the true and correct excerpts of source code files attached hereto as Exhibit 5.

18. The Golf USA website was available to users of the internet by at least May 12, 1995, as evidenced in an NES log file showing access from outside the NES server, a true and correct copy of which is attached as Exhibit 6.

19. I acknowledge that willful false statements are punishable by fine or imprisonment, or both (18 U.S.C. 1001), and may jeopardize the validity of the application or any patent issuing thereon.

12/21/94

Dear Skeeter,

Thank-you for spending some time with me and taking me out to lunch during my recent visit. I enjoyed meeting everyone and was very impressed with your operation.

The opportunities that now seem quite obvious with respect to the Internet are exciting and I'm happy to say that I would like to participate — exactly how remains to be determined.

I'll contact you soon.
to you and your family.

NES 9721

Happy holidays
Best regards,
Bill

From: Christopher Coley [ccoley]
Sent: Tuesday, May 09, 1995 4:37 PM
To: hostmaster@internic.net
Cc: support@srmc.com
Subject: Domain Registration golfusa.net

(1) The name of the top-level domain to join
(EDU, COM, MIL, GOV, NET, ORG).

1. Top-level domain: NET

NET -

(2) The name of the domain (up to 12 characters). This is the name that will be used in tables and lists associating the domain with the domain server addresses. [While, from a technical standpoint, domain names can be quite long we recommend the use of shorter, more user-friendly names.]

2. Complete Domain Name:

#1.)golfusa.net

#2.)

#3.)

(3) The name and address of the organization establishing the domain.

3a. Organization name: GulfWind Ltd.

3b. Organization address: 1714 Ringwood Ave
San Jose,
CA 95131

(4) The date you expect the domain to be fully operational.

4. Date operational: 5/31/95

(5) The handle of the administrative head of the organization -- or this person's name, mailing address, phone number, organization, and network mailbox. This is the contact point for administrative and policy questions about the domain. In the case of a research project, this should be the principal investigator.

NOTE: Both the Administrative and the Technical/Zone contact of a domain MUST have a network mailbox, even if the mailbox is to be within the proposed domain.

Administrative Contact

5a. Handle (if known): howie

5b. Name (Last, First): Lyke Howie

5c. Organization: SRMC

5d. Mail Address: 1714 Ringwood Ave
San Jose, CA 95131

5e. Phone Number: 408-437-1800
5f. Net Mailbox : howie@srmc.com

(6) The handle of the technical contact for the domain -- or the person's name, mailing address, phone number, organization, and network mailbox. This is the contact point for problems concerning the domain or zone, as well as for updating information about the domain or zone.

Technical and Zone Contact

6a. Handle (if known): ccoley
6b. Name (Last, First): Coley Chris
6c. Organization: SRMC
6d. Mail Address: 1714 Ringwood Ave
San Jose, CA 95131

6e. Phone Number: 408 437-1800
6f. Net Mailbox : ccoley@srmc.com

(7) Domains must provide at least two independent servers on Government-sponsored networks that provide the domain service for translating names to addresses for hosts in this domain.

* If you are applying for a domain and a network number assignment simultaneously and a host on your proposed network will be used as a server for the domain, you must wait until you receive your network number assignment and have given the server(s) a netaddress before sending in the domain application. Sending in the domain application without complete information in Sections 7 and 8 of this template will result in the delay of the domain registration.

Also, establishing the servers in physically separate locations and on different PSNs and/or networks is strongly recommended.

NOTE: All new hosts acting as servers will appear in the DNS root servers but will not appear in the HOSTS.TXT file unless otherwise requested.

Primary Server: HOSTNAME, NETADDRESS, HARDWARE, SOFTWARE

7a. Primary Server Hostname: ns.srmc.com
7b. Primary Server Netaddress: 204.160.128.10
7c. Primary Server Hardware: Sun 4490
7d. Primary Server Software: Sun o/s 4.1.3

(8) The Secondary server information.

8a. Secondary Server Hostname: smail.srmc.com
8b. Secondary Server Netaddress: 204.160.129.100
8c. Secondary Server Hardware: Sun 4/490
8d. Secondary Server Software: SunOS 4.1.3_U1

(9) If any currently registered hosts will be renamed into the new domain, please specify old hostname, netaddress, and new hostname.

For example:

BAR-FOO2.XYZ.COM (26.8.0.193) -> FOO2.BAR.COM
BAR-FOO3.XYZ.COM (192.7.3.193) -> FOO3.BAR.COM
BAR-FOO4.ARPA (34.6.0.193) -> FOO4.BAR.COM

(10) Please describe your organization briefly.

Sent: Tuesday, May 16, 1995 8:00 PM
To: ccoley@smail.srmc.com
Subject: Re: [NIC-950509.820] GOLFUSA.NET

Registration for the domain shown below has been completed.
Please let us know if any changes are required.

The new information will not be visible via WHOIS until the
next business day.

Before this information is released to the Internet (normally
accomplished via root server file updates on Mon, Wed, and Fri
afternoons about 17:00 Eastern time) we will check to see that the
primary and secondary name servers are reachable and contain the
appropriate SOA and NS resource records.

If your name servers are not properly configured, we will place your
registration on hold until we hear from you. When you are ready to
have the domain released to the network, contact us at any of
the addresses below.

Registering a domain name does not confer any legal rights to that
name and any disputes between parties over the rights to use a
particular name are to be settled between the contending parties
using normal legal methods (See RFC 1591).
